LEBANON REFORESTATION INITIATIVE

A BRIEF OVERVIEW

INTRODUCTION: Who We Are?

The Lebanon Reforestation Initiative (LRI), is a program launched in 2011 by the United States Forest Services (USFS), Office of International Programs (IP) through the support and funding of the United States Agency for International Development (USAID).

LRI is conceived as a partnership with Lebanese grassroots organizations and local communities to promote reforestation and prevent wildfires that threaten Lebanon's forests.

Wildfires and diseases, coupled with climate change, pose serious potential threats to Lebanon's forests

VISION & MISSION

VISION

The Lebanon Reforestation Initiative provides a successful participatory framework for long-term technical and financial assistance to expand and protect Lebanon's forests for a sustainable future.

MISSION

The Lebanon Reforestation Initiative aims to restore Lebanon's native forests and to instill commitment to reforestation and wildfire prevention and response, through capacity building of local communities and organizations.

COMMUNITY ENGAGEMENT STRATEGY

USAID
FROM THE AMERICAN PEOPLE

Who is the Community?

WILDFIRE PREVENTION

A collaborative approach that connects all those who play a role in wildfire education, planning and action with comprehensive resources to help reduce risk.

Fire Adapted communities

Firewise adapted to Lebanon → A collaborative process that empowers communities to work together in order to prevent and reduce wildfire risks and their negative economic, social, and ecological impacts on local communities (UOB/LRI, 2014).

Structure of the wildfire prevention action plan

Technical activities for
wildfire risk reduction

Community and Social
activities

Wildfire Risk Assessment

FIRE RISK CONCEPT

Risk = Hazard x Vulnerability

Fire hazard assessment involved the use of data related to

- 1) number of fires/plot during the last decade,
- 2) density of buildings,
- 3) various ignition factors,
- 4) slope,
- 5) aspect,
- 6) density of forest fuel.

Fire vulnerability assessment comprised a number of environmental and socio-economic sensitivity factors (e.g. protected areas, presence of homes, infrastructure, among others).

Hazard (i.e. dense fuel)

Vulnerability
(i.e. A Natural Reserve of high
environmental and socio-cultural value)

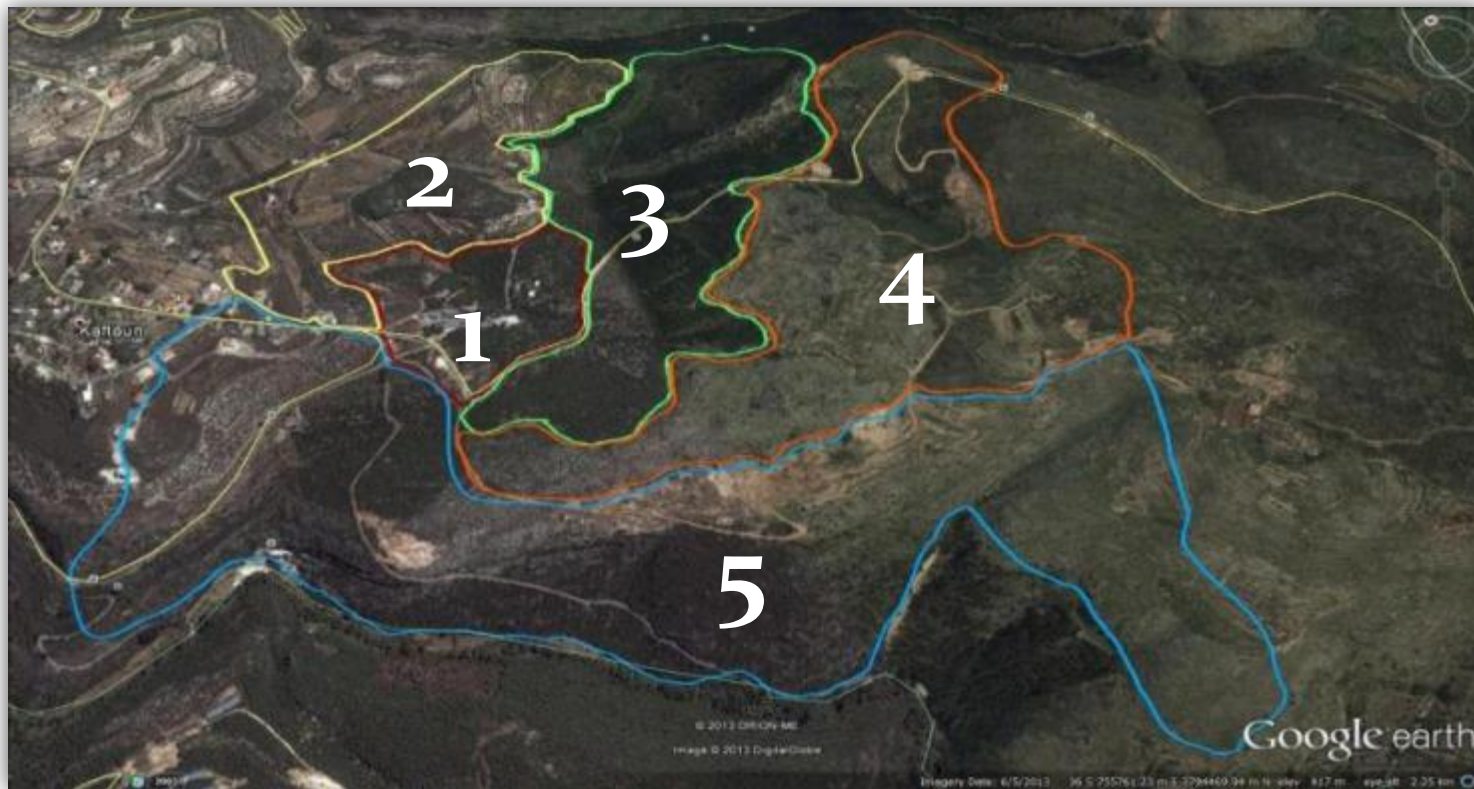

X

Methodology for assessment

- Field survey for data collection
- Fire hazard assessment
- Fire vulnerability assessment
- Overall wildfire risk assessment

Grouping plots into five general zones and fire risk categorization

FIRE RISK REDUCTION TECHNICAL ACTIVITIES

Best Practices For Managing Fire Risk in dense forests

A: Unmanaged dense forest

- A1. Breaking horizontal and vertical fuel continuity (Pruning, thinning, cleaning)
- A2. Creating fuel breaks
- A3. Installing signs to increase awareness
- A4. Increasing water sources and accessibility around these areas
- A5. Introducing controlled grazing

Best practices for managing fire risk in abandoned agricultural land

B: Wild land neighboring agricultural lands and abandoned agricultural lands.

- B1. Creating fuel breaks neighboring agricultural land
- B2. Introducing/encouraging agro forestry activity on abandoned and/ or marginalized private lands.
- B3. Implementing of fuel management practices.
- B4. Preventing fire incidence (economically viable alternatives to burning crop residues)
- B5. Prescribed burning (low cost land management techniques but not recommended)

Pruning

Fire Breaks

Controlled grazing

Application on abandoned terraces

COMMUNITY SOCIAL ACTIVITIES

Replication In New Areas

Currently, LRI is starting to replicate the community led wildfire prevention approach in two areas in Lebanon with managed valuable forests
